PASTA worksheet

Stages	Sneaker company
I. Define business and security objectives	Make **2-3 notes** of specific business requirements that will be analyzed. • Connect Sellers and Shoppers • Several payment options • Compliant with legal guidelines • Data is a big concern in terms of protection and privacy
II. Define the technical scope	List of technologies used by the application: • *Application programming interface (API)* • *Public key infrastructure (PKI)* • *SHA-256* • *SQL* Write **2-3 sentences** (40-60 words) that describe why you choose to prioritize that technology over the others. PKI ensures the information exchanged online is secured by using encryption. By ensuring the security of how information is processed across the network, especially the customers' sensitive data, this helps reinforce the point that data and privacy are a priority and concern for the company. This in sense, minimizes the attack surface and deters any packet sniffing from attackers
III. Decompose application	Sample data flow diagram
IV. Threat analysis	List **2 types of threats** in the PASTA worksheet that are risks to the information being handled by the application. • SQL Injection • Session Hijacking
V. Vulnerability analysis	List **2 vulnerabilities** in the PASTA worksheet that could be exploited. • Injection Problem • Privacy Violation

VI. Attack modeling	Sample attack tree diagram
VII. Risk analysis and impact	List **4 security controls** that you've learned about that can reduce risk. Principle of Least Privilege Intrusion Detection System (IDS) Awareness Training Multi Factor Authentication
