Parking lot USB exercise

Contents	Write **2-3 sentences** about the types of information found on this device. There is personal information shown on the drive clearly that should not be exposed. This includes things like vacation ideas and Jorge's own wedding list along with information exclusive within the hospital
Attacker mindset	Write **2-3 sentences** about how this information could be used against Jorge or the hospital. The wedding list and vacation ideas put not just Jorge at risk, but his fiance too. An attacker could look through these files and find out information like Jorge's location and the people in his life. For example, a malicious email could be sent to Jorge posing as his wedding planner to extract more money out of him, or they could pose as an airline to tell him he won a free holiday to make him click the link in an email and extract more from him.
Risk analysis	Write **3 or 4 sentences** describing technical, operational, or managerial controls that could mitigate these types of attacks: Educating employees about what to do with suspicious USB drives is a managerial control that could be implemented to reduce the risk of these incidents. An operational control could be antivirus scans to detect for any malware present on systems to minimise the impact if these incidents happened. A technical control could be USB whitelisting to only allow specific usb drives to be executed on systems. This manages the risk of any suspicious usb drives from having an impact on systems.
